TO THE CAMPUS COMMUNITY

Dear Faculty, Staff, and Students:

As you know, the University of California is a national leader in healthcare and environmental practices. Research demonstrates that smoking on campuses not only affects the individual's health, but also exposes others to second- and third-hand smoke, and is deleterious to the environment. As part of the University's leadership role and commitment to protecting the health and safety of students, faculty, staff, the public, and the environment, in a letter dated January 9, 2012, President Yudof asked each chancellor to form a committee and to task it with implementing a smoke-free policy for its campus by January 2014. I asked Executive Vice Chancellor Gene Lucas to chair UCSB's Smoke-Free Campus Steering Committee. The full membership is listed below.

The President advised the chancellors to include the following key elements in their campus smoke-free policy:

Smoke-free means that smoking, the use of smokeless tobacco products, and the use of unregulated nicotine products (e.g., "e-cigarettes") will be strictly prohibited in indoor and outdoor spaces, including parking lots, private residential space, and the Medical Center campuses.

The policy will apply to all UC facilities, whether owned or leased.

Sale and advertising of tobacco products must be prohibited in University-owned and -occupied buildings.

Enforcement should be primarily educational, with an emphasis on cessation resources.

The draft policy proposed by the UCSB Smoke-Free Campus Steering Committee contains these elements and, if adopted, would replace our current policy on smoking. (For the current policy, see <http://www.policy.ucsb.edu/policies/policy-docs/smoking.pdf>.) The draft includes a resource section (V) that provides links to cessation programs and a helpline. The draft also includes an optional Appendix that provides data about why the Office of the President has tasked the campuses with implementing a smoke-free policy.

In order to learn more about the proposed policy, please visit our campus's Tobacco-Free website at <http://tobaccofree.ucsb.edu>. I've attached UCSB's [proposed draft policy](#) for your review and comments by July 1, 2013. Please send your comments to [info@tobaccofree.ucsb.edu](mailto:info@tobaccofree.ucsb.edu). Over 1,100 campuses nationwide have adopted a smoke-free policy, with close to 800 campuses having adopted a tobacco-free policy. Offering a smoke-free and tobacco-free environment will contribute positively to the health and well-being of all of our community and the environment.

For more information about the impetus for the policy, including the Smoking Policy Subcommittee of the Occupational Wellness Forum, its report to the President, and other resources, please visit <http://www.ucop.edu/risk-services/reports-resources/partners/smoking-policy-subcommittee.html>.

I look forward to your comments.

Sincerely,

Henry T. Yang  
Chancellor

**UCSB Smoke-Free Campus Steering Committee**

**Gene Lucas, Chair**; Executive Vice Chancellor

**Sharon Conley**, Professor, Education

**Joe Harkins**, Acting Fire Marshal, Environmental Health and Safety

**Laury Oaks**, Associate Professor, Feminist Studies

**Jeanne Stanford**, Director, Counseling and Psychological Services

**Michael Takahara**, Health and Wellness Educator, Dean of Students Office

Associated Students representative (TBA)

Graduate Students Association representative (TBA)

**Ex officio:**

**Marc Fisher**, Senior Associate Vice Chancellor, Administrative Services

**Chuck Haines**, Director, Capital Development

**Pamela Lombardo**, Director, Environmental Health and Safety

## **UC SANTA BARBARA POLICY AND PROCEDURE**

### **Smoking, Tobacco, and Unregulated Nicotine Products**

Contact: Student Health Services, and Environmental Health and Safety

Issue: Proposed for January 1, 2014

**Draft 4/3/2013**

Supersedes: Smoking Policy, January 2004

Pages: 3

## **SMOKING, TOBACCO, AND UNREGULATED NICOTINE PRODUCTS**

### **I. BACKGROUND**

The Surgeon General of the United States has determined that cigarette smoking is the leading preventable cause of illness and premature death in the United States. Research indicates that non-smokers who are regularly exposed to secondhand tobacco smoke are also at increased risk of illness. Moreover, cigarette litter is harmful to our environment and wildlife.\* Therefore, to provide a safe and healthy environment for students, faculty, staff, and visitors, UCSB has adopted the following policy.

### **II. SCOPE**

This policy applies to everyone on or within UCSB managed property.

### **III. POLICY**

To protect the health and safety of students, faculty, staff, and visitors, and the environment:

- A. Smoking and the use of smokeless tobacco or unregulated nicotine products (such as electronic cigarettes) are prohibited on and within UCSB managed property.
- B. The sale or distribution of smoking, tobacco, and unregulated nicotine products on or within UCSB managed property is prohibited.
- C. Advertising smoking, tobacco, and unregulated nicotine products in university publications and within UCSB managed property is prohibited, with the exception that commercial newspapers and magazines that contain these advertisements may be sold in university facilities, where commerce is permitted.

### **IV. RESPONSIBILITIES**

Protecting the UCSB community and the environment from the harmful effects of smoking, secondhand smoke, smokeless tobacco, and unregulated nicotine products requires the consideration and cooperation of everyone, when they are on or within UCSB managed property.

- A. Each individual is responsible for complying with the policy.

\*For more information on the effects of smoking, exposure to secondhand smoke, use of smokeless tobacco and unregulated nicotine products on people and the environment, see Appendix.

- B. Department heads are responsible for ensuring that faculty, staff, students and visitors within their area are informed of the policy, and for resolving any noncompliance issues.
- C. Student Health Services and Environmental Health and Safety are responsible for providing smoking cessation education and programs.
- D. Campus Design and Construction is responsible for the posting of signs at entrances to the campus to communicate smoking is prohibited on and within UCSB managed property.

#### VI. APPENDIX – Harmful Effects of Smoking and Smokeless Products

- A. Smoking, exposure to secondhand smoke, and the use of smokeless tobacco or unregulated nicotine products are harmful to people.<sup>1</sup>
  - 1. Tobacco-related illnesses are the leading cause of preventable mortality in the United States, killing 443,000 people each year. (CDC, 2008) Cigarette smoking can cause chronic lung disease, coronary heart disease and stroke, in addition to cancer of the lungs, larynx, esophagus, mouth, and bladder. Cigars

and smokeless tobacco products are known to cause lung, larynx, esophageal, and oral cancer. (CDC 2010)

2. Exposure to secondhand smoke is the third leading cause of preventable death in the United States, killing over 50,000 non-smokers each year. (Glantz & Parmley, 1991) Exposure to secondhand smoke causes lung cancer, heart disease, and respiratory illnesses. (MMWR, 2011).<sup>2</sup> The United States Environmental Protection Agency (EPA) has classified secondhand smoke as a group A carcinogen, the most dangerous class of carcinogen (USEPA, 1992). The Surgeon General of the United States has concluded that there is no risk-free level of exposure to secondhand tobacco smoke. Ventilation cannot eliminate exposure of nonsmokers to secondhand smoke; establishing smoke-free environments is the only proven way to prevent exposure. (USDHHS, 2006)
- B. Cigarette butts are harmful to our environment.
1. The California Air Resources Board has categorized secondhand smoke as a toxic air contaminant. (CEPA, 2006)
  2. Discarded cigarette butts are a form of non-biodegradable litter. Carried as runoff from streets to drains, to rivers, and ultimately to the ocean and its beaches, cigarette filters are the single most collected item in international beach cleanups each year.<sup>2</sup>
  3. Cellulose acetate (a form of plastic from which filters are made) is photodegradable but not bio-degradable. Under ideal environmental conditions, ultraviolet rays from the sun will eventually break the filter into smaller pieces. However, the source material never disappears; it essentially becomes diluted in water or soil, leaking the toxic chemicals, the cigarette filter was designed to trap, into ecosystems. Toxic cigarette filters have been found in the stomachs of fish, birds, whales and other marine creatures who mistake them for food.<sup>3</sup>
  4. Even when properly disposed, cigarette butts are hazardous solid waste, increasing landfill demands and adding costs to waste disposal programs. (176,250,000 pounds of discarded butts in 1998 in the United States.<sup>3</sup>)
